ILLUSTRATION #5. THIRD TEST GOF VOLUNTEER

In a remote location, far removed from the prying eyes of the local community, including the ever-watchful Spiderman or a garrulous Kathie, lies the clandestine GOF Zombie Samples Lab, situated in the arid expanses to the east of Burbank. Here, the enigmatic Old Doc F, colloquially referred to as the Beagle Guy, played a pivotal role in our inaugural experiment with a domestic variant of ACME's Harmonic Frequency Modulator. This endeavor was complemented by a control test designed to elucidate the profound implications of frequency modulation.

Our findings suggest that such modulation not only enhances technological capabilities but also facilitates unauthorized access to the lower tiers of the known Multiverse. This breakthrough potentially enables us to circumvent the stringent regulations imposed on CIS Humans, thereby allowing for unregulated entry into the Stargate Immigration transit facilities, which are typically reserved for only organized tours and day trips.
The complexities surrounding the stringent immigration policies warrant a nuanced examination, yet it is essential to highlight a prevailing culture that

appears to marginalize individuals from CIS Humanity, relegating them to a status akin to that of irregular day laborers residing in a metaphorical "Transit Camp Hell" while they navigate the confines of a privileged "gated community" often referred to as Heaven.

This dynamic suggests a troubling dichotomy where certain groups are systematically devalued, raising critical questions about the underlying motivations and societal implications of such discriminatory practices.

The assertion that a significant number of CIS individuals are trafficked across the Harmonic Barriers, which delineate their

realm from our so-called Prison Planet Earth, is indeed valid.
These individuals are not merely in pursuit of day labor; they are also drawn by the extensive social welfare benefits available to them, which are complemented by an exceptional dental care plan.
This phenomenon highlights the complex interplay between economic necessity and the allure of social services that can be found in different multiverse contexts.
In our decision-making process, we opted to engage a random individual resembling a zombie, who was loitering nearby and soliciting cigarettes and spare

change, to test the device by purchasing a Happy Meal.

This choice stemmed from our apprehension about experimenting with the device on ourselves; a single maladjustment of the harmonic dial could lead to unpredictable and potentially perilous outcomes, leaving us uncertain of the consequences that might ensue.

In the process of obtaining the necessary release forms, which were exchanged for a Happy Meal and two packs of menthol-flavored, filtered cigarettes, we took a brief period to acclimate our test Zombie Sample to the fundamental control dials.

This included demonstrating the procedure for engaging the red return button, ensuring that the sample was adequately prepared to interact with the equipment.

The initial endeavor proved to be unsatisfactory, as the Zombie Sample activities associated with the device vanished abruptly in a startling burst of light, leaving no trace behind.

After a prolonged period of waiting, we began to find the absence of a return rather peculiar, leading us to conjecture that an unfortunate incident may have befallen the Zombie Sample.

The sudden flash of light did not align

with the expected operation of the device, a notion supported by the Korean Language Manual, which we could only interpret through the lens of our limited understanding, as none of us possessed proficiency in Korean.

Unfortunately, our reliance on Googalee Translator once again fell short, compounding our frustrations and uncertainties regarding the situation. The prevailing opinion within our research group was that the Zombie Sample had settled in a location that suited its preferences, a view I found myself sharing with my esteemed colleague, Old Doc F. I articulated my

belief that the sample had effectively engaged its return algorithm to remain in this chosen site.

My confidence in the doctor has been unwavering, particularly since he recommended that we invest in a timeshare for his luxurious condominium in Shanghai, which boasts a picturesque view of the river and is conveniently located just a few blocks from both Ms. Fang Fang's establishment and the Gentleman's Club and Laundromat owned by my old friend Eric on Wang Boulevard.

The condo is a delightful retreat, often available for use, as the doctor remains

preoccupied with his research on a vaccine aimed at beagles.

This peculiar focus stems from his long-standing animosity towards the breed, which he attributes to their relentless pursuit of him during his college years, often resulting in frantic chases that left him scrambling for safety.

The second iteration of our approach was characterized by a more authoritative strategy, wherein the Zombie Sample was prohibited from receiving the smokes until their return was confirmed.

We were fortunate to be among the initial thousand customers to place an order with E-Baiter, which allowed us to

receive a complimentary second device, although we were required to cover a nominal fee for processing and shipping.
Following the successful completion of the second test, we enlisted a third volunteer who was provided with a cutting-edge digital camera sourced from a nearby Dollar Store.
This individual was tasked with capturing selfies at various locations to validate or refute our hypothesis that alterations in frequency correlate with observable, external changes in appearance.
It is noteworthy that the GOF Zombie Samples, which we are studying, do not subscribe to Ahriman's Great Social Reset

ideology, particularly its fixation on the concept of 72 genders, nor do they express offense at the use of most pronouns, with the notable exception of the phrase "There he is, shoot him." The visual representations within this white paper demonstrate that the external characteristics of the GOF Zombie Sample undergo significant transformations with each harmonic frequency barrier that is breached. Although we had previously hypothesized the possibility of such alterations, we were taken aback by both the magnitude and the nature of the changes observed in its outward

appearance.
Notably, a firsthand account from our test volunteer indicated that there were no alterations in their concerns or mental awareness, nor did they report any sense of enlightenment resulting from the experience.
It is likely that you are familiar with various research teams funded by DARPA that have asserted their text subjects exhibited a wide and diverse array of skills and knowledge.
I can understand if you are skeptical about our findings, perceiving them as the output of a less reputable, makeshift, or unorthodox group.

The primary distinction in our research was the absence of adequate financial support, largely attributable to the semi-retirement of our lead researcher, Doc F, who is presently evading a number of aggressive process servers and bail bondsmen associated with congressional matters.

This lack of funding significantly hindered our test volunteer's ability to dedicate the necessary time and resources to identify their counterpart across the various harmonic frequencies. Consequently, this limitation serves as one of the key reasons why our study was unable to corroborate the findings of

previous research.
The majority of our white paper has undergone redaction at the request of specific agencies that have threatened legal action against WWWG should their identities be revealed.
Consequently, the illustrations remain intact; however, without the accompanying research to substantiate them, they merely represent decorative sketches created by a notorious individual associated with the discredited faction known as the Jesuits of Truth.
